

Nuclear scientists and policy makers communicate

The Task 3 of EFINION work package aims at disseminating multidisciplinary application-oriented research to the scientific community, the public and, especially, the policy makers.

Therefore, the EFINION team contacted the Member of European Parliament Philippe De Backer in order to propose a Communication Day and present the multi-disciplinary applications-oriented research activities of ENSAR.

This Communication Day was scheduled on 27 January 2015.

This very special event included an exhibition of the scientific achievements of the ENSAR infrastructures regarding applications and an oral presentation of these achievements by Karl Johnston from CERN-ISOLDE. It was the occasion of a face-to-face dialogue between nuclear scientists and policy maker.

Representatives from ENSAR management team, EFINION team and NuPECC attended the Communication Day.
